" NATIONAL SAMPLE SURVEY TO ESTIMATE ANNUAL RISK OF TUBERCULOSIS INFECTION IN DIFFERENT PARTS OF INDIA "

Progress Report : January to June 2003

This is in continuation of reports published in previous issues of NTI Bulletin regarding the survey, being conducted by the National Tuberculosis Institute as a nodal center. The fieldwork has been completed in all the 4 zones (i.e., north, south, west, and east) by January 2003.

Data entry and primary analysis of all the zones have been completed.

A detail report is under preparation.
